

Rubikubism Tutorial for Gimp

Tools: Gimp, G'mic-Qt 2.8.4.

1. Open your image. Crop it to 505x505 square.
2. Filters: G'mic-Qt...Arrays & tiles, Grid [Cartesian]. Use 5 for Y and X.

3. Click Apply, and you save yourself from launching G'mic again.
4. Go to Testing, Garagecoder, Multi Thresholds. Replace the default colors.
1st color: blue, 2nd: red, 3rd: orange, 4th: yellow and 5th: white.
The threshold values in my pic are pretty good, but you may want to change them a bit, depending on the image you are using. Save the preset!
5. Click OK.

6. Add a black background layer.
